

# DSP8.8

## INFORMATION GUIDE

Offering the ultimate DSP available, our DSP8.8 boasts 6 preamp inputs, 8 high-level inputs, and 8 preamp outputs, Wi-Fi connectivity, and tuning options to make any system sound spectacular.

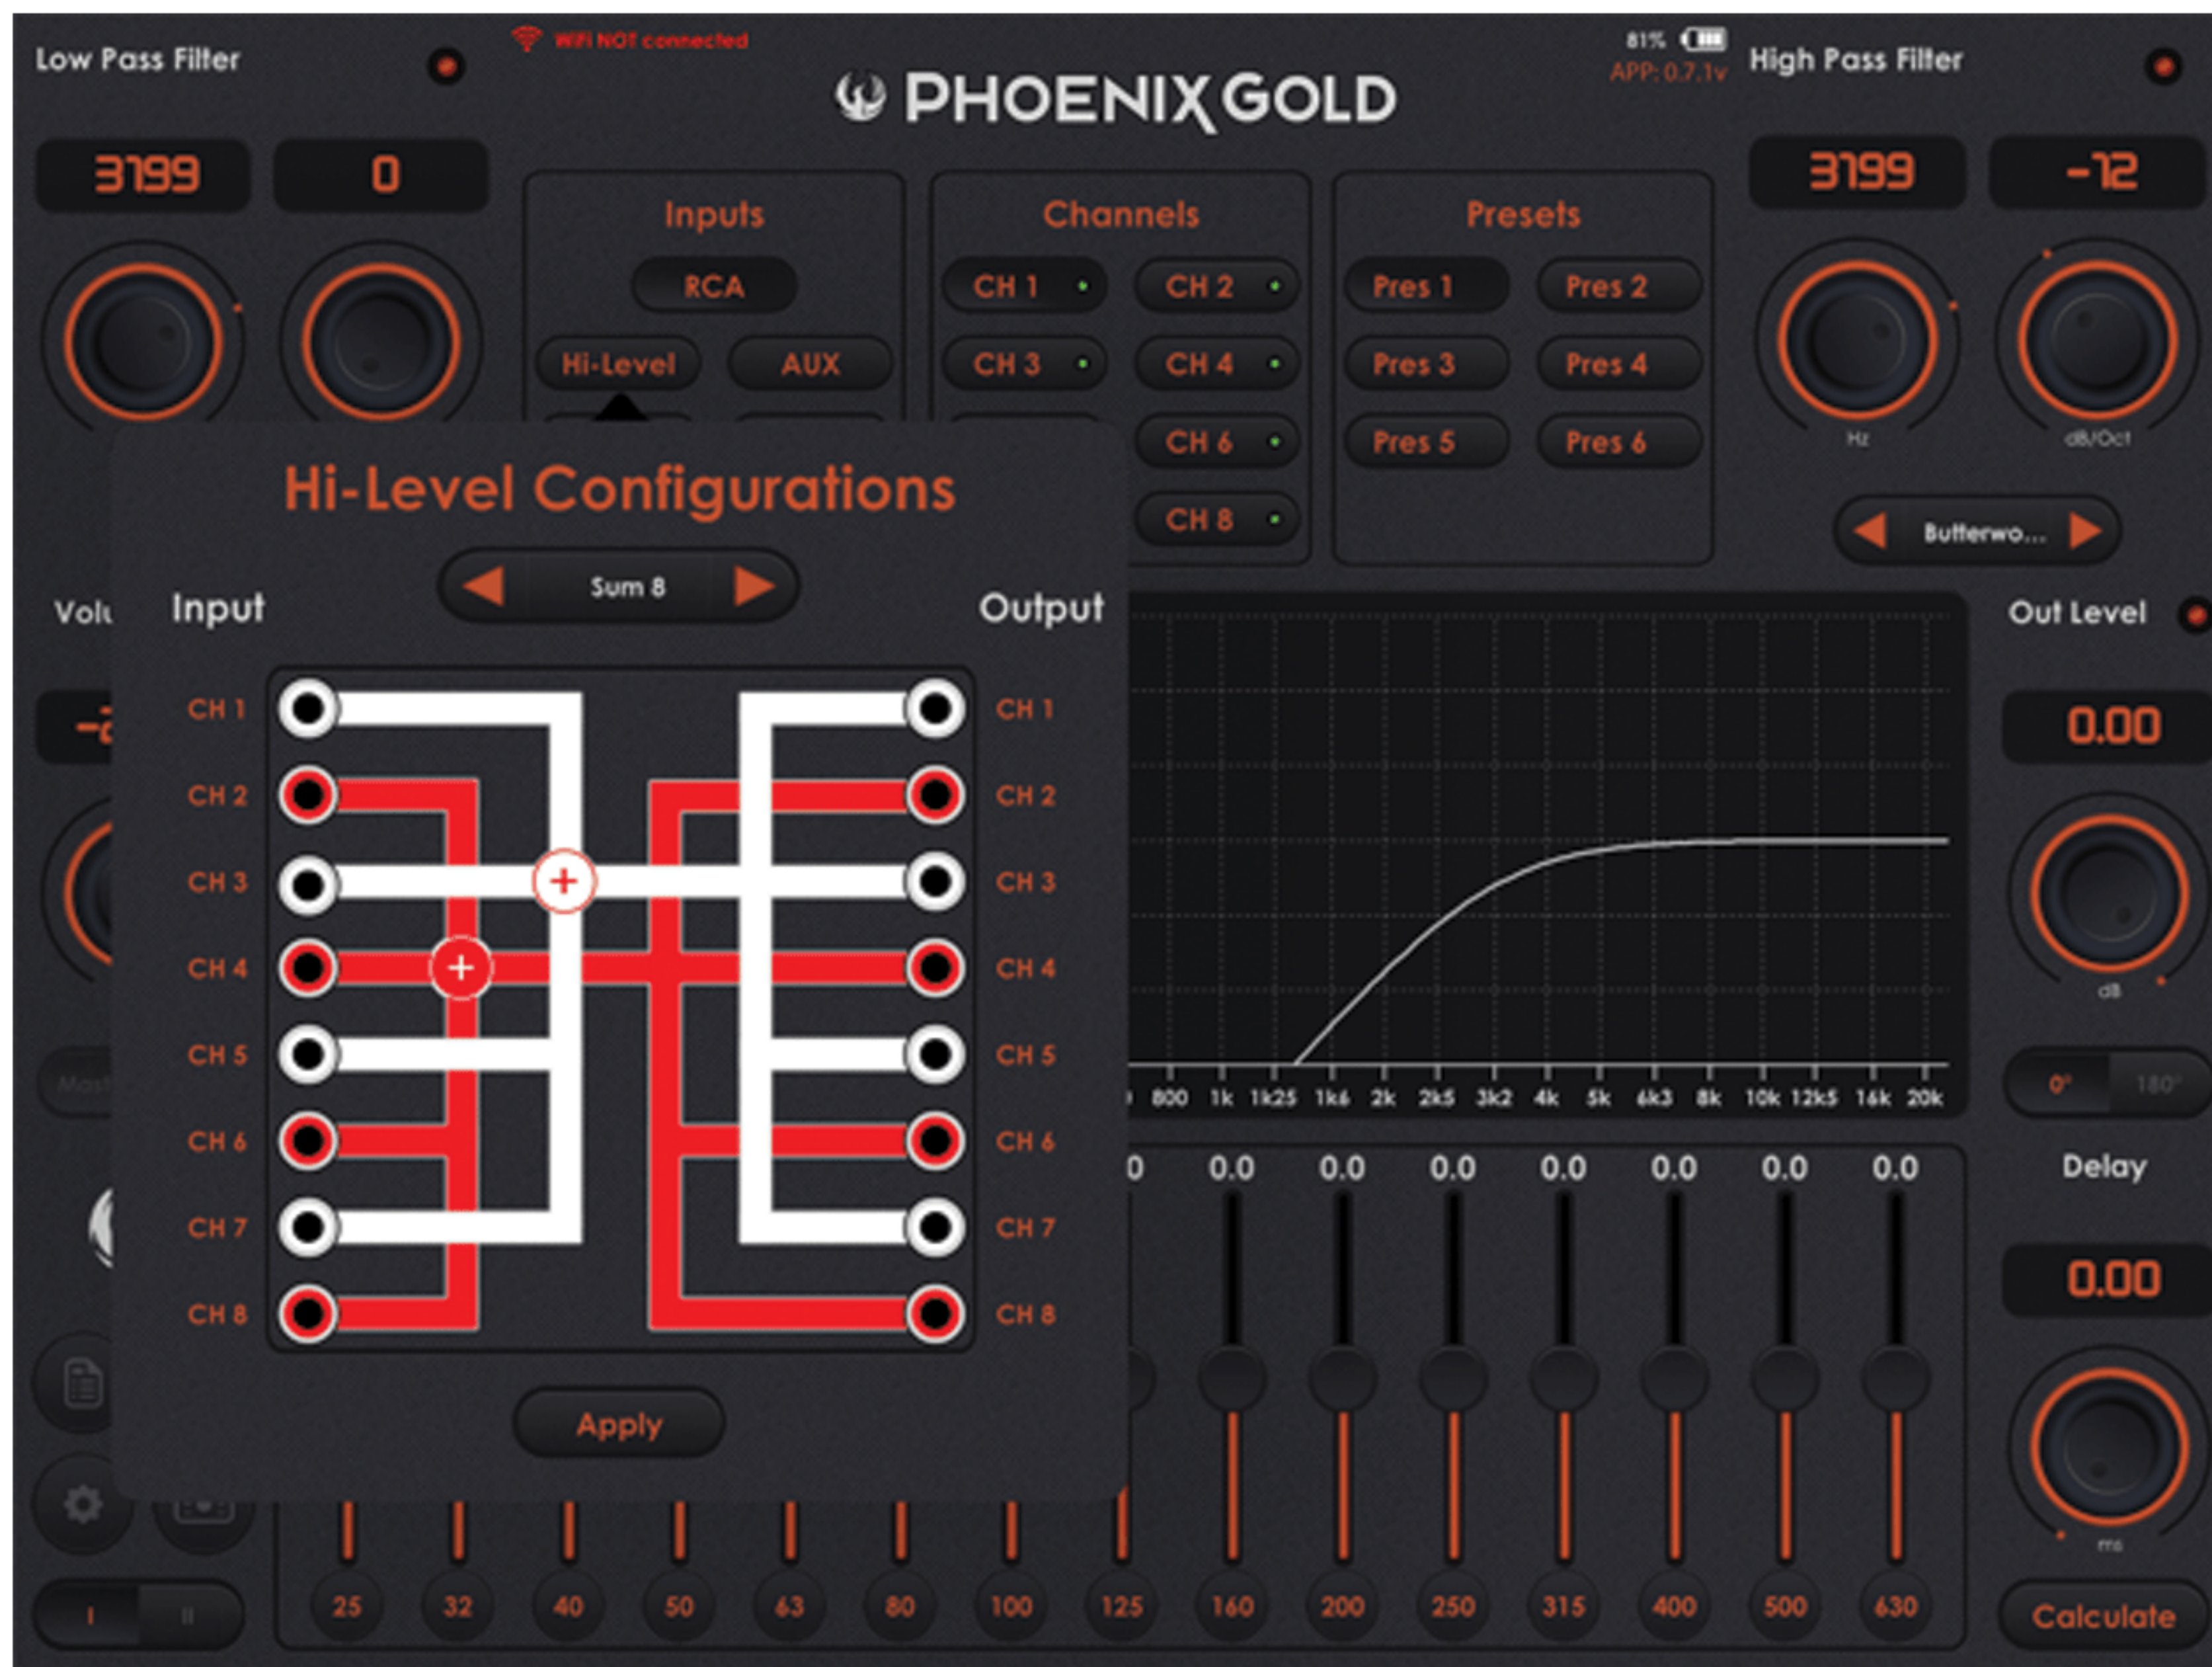

Wi-Fi Interface from Mac, iOS, PC, and Android, simple or in-depth interface options depending on application. It also features uncompressed audio streaming via Wi-Fi from iOS devices or via USB input from Windows devices.

# DSP8.8

## INFORMATION GUIDE

BELOW: This screen shows how high-level signals can be configured from inputs to outputs. You can select from 6 possible configurations to suit your system needs. When done, tap the apply button to confirm the selected configuration.

BELOW: This is our very fast and accurate automatic time delay calculator. This takes all the guess work out of properly setting up the DSP8.8 for different speaker locations. Simply assign each of the active channels, input the measured speaker distances to the listener, then press calculate to listen to the results.

ABOVE: Here's how each of the 8 channels can be customized: change the alias "name", copy configurations to and from another channel, link channels together or even mute the selected channel; making setting up the DSP8.8 very easy.

ABOVE: Our home screen is where all the functions of the DSP8.8 can be accessed. One large screen provides a broad view to equalization, crossover, time delay and input/output. There's no need to flip back and forth from multiple screens to setup and adjust the DSP8.8.
