

## Radio Replacement Interface

For select BMW vehicles

RP4.2-BM52

### Radio Replacement Interface For select BMW vehicles

The Autoleads RadioPRO4 Radio Replacement Interfaces retain parking sensors, warning chimes, steering controls, and vehicle menu options - and also provides multimedia outputs for aftermarket radios.

An all in one radio replacement and steering control interface, the RadioPRO4 is plug and play solution, pre-loaded for your vehicle.

### Benefits

- ▶ Keeps important features of your vehicle when replacing your radio
- ▶ Customise steering wheel control buttons
- ▶ Plug and play harness for easy installation

### Retains

- ▶ OEM steering wheel control functions
- ▶ Warning chimes (including front and rear park assist and front collision detection)
- ▶ Access to vehicle menu options where applicable like date & time settings

### Key Features

- ▶ Data controlled outputs for connecting an aftermarket navigation radio including Speed Pulse, Reverse Gear, Illumination, and Handbrake
- ▶ Highly visible tricolor LEDs to keep the user informed of the module's status
- ▶ Vehicle specific wiring harness included & Radio patch lead included
- ▶ Reassign steering control buttons plus add long and short press functions
- ▶ Data controlled 10 amp accessory output
